About Us

One Student. One Academic Identity.
A Transparent and Trusted Higher Education Ecosystem.

About SATYA-APAAR 2.1

SATYA-APAAR 2.1 is an AI-assisted and auditable platform designed to reconcile student admissions and enrolment verification across AICTE-approved institutions. It ensures that every admission is traceable, every approved seat is accounted for, and every student has a verifiable academic identity through APAAR, while maintaining transparency, integrity and compliance with national education policies.

The platform brings together institutions, students, AICTE, authorised verifiers and trusted digital systems to build a secure, data-driven and accountable higher education ecosystem for India.

Problem Statement

Student admission data in higher education is often fragmented, inconsistent and not verifiable across institutions. This leads to issues such as duplicate admissions, unaccounted seats, manual verification processes and lack of transparency, making it difficult for regulators to ensure compliance and for students to prove their academic identity.

Vision

A transparent, trusted and technology-driven higher education ecosystem where every student's admission is verifiable, every approved seat is accounted for, and data integrity is maintained across all AICTE-approved institutions.

Mission

- Reconcile institutional admission data with student-level records.
- Ensure verifiable academic identities through APAAR.
- Enable transparent seat monitoring and utilisation.
- Leverage AI and data analytics for integrity and compliance.
- Build a secure, interoperable and auditable platform for all stakeholders.

Objectives

- Verify and validate student identities using APAAR.
- Reconcile aggregate and student-level admission data.
- Monitor approved seat intake and utilisation.
- Detect and flag anomalies using AI and data analytics.
- Provide evidence-based insights and reports for AICTE.
- Ensure data transparency, security and auditability.

Key Benefits

Transparency
Complete visibility of enrolment data

Accountability
Policy-based seat monitoring

Integrity
Evidence-driven decisions

Better Governance
Data-backed insights for AICTE

Project Background

With the introduction of APAAR (Automated Permanent Academic Account Registry) and increasing digital transformation in education, there is a need for a unified platform to bring together institutional admission data, student-level verification and regulatory oversight.

SATYA-APAAR 2.1 builds on existing digital initiatives and leverages modern technologies such as AI-driven validation, data reconciliation and secure digital identity verification to address these challenges and create a robust, future-ready solution for higher education governance in India.

© 2026 SATYA-APAAR 2.1 | All Rights Reserved | Designed for AICTE, Government of India

Our Core Features

A unified platform for verified admissions, academic identity resolution and trusted seat management across AICTE-approved institutions.

Key Features

AI-Powered Data Validation

Smart data ingestion, column mapping and validation to ensure high-quality institutional data.

Learn More →

Aggregate-to-Student Reconciliation

Compare reported aggregate enrolment with verified student-level records and identify variances.

Learn More →

Temporal Enrolment Integrity Engine (TEIE)

Analyse admission, transfer and transition timelines to distinguish genuine mobility from unexplained overlaps.

Learn More →

SeatGuard

Track approved intake, seat utilisation and category-wise occupancy with policy-versioned seat ledger.

Learn More →

APAAR Identity Resolver

Validate and match student identities using APAAR with protected identity matching and exception handling.

Learn More →

AI-Assisted Review

Identify risk indicators and anomalies with explainable AI to support human review.

Learn More →

RecordTrust Audit Centre

Maintain tamper-evident, verifiable audit history for all data changes and decisions.

Learn More →

ConsentPass Credential & Verification

Issue and verify purpose-limited digital credentials with QR/API verification for students, institutions and authorised verifiers.

Learn More →

SATYA-APAAR 2.1 — FINAL NAVIGATION ARCHITECTURE & APPLICATION STRUCTURE

Act as a Senior Software Architect, UI/UX Architect and Full-Stack Development Lead.

We are developing SATYA-APAAR 2.1 for Smart India Hackathon 2026 (SIH26263).

The UI design reference consists of 29 planned screens. Your first task is to establish the complete application navigation, parent menus, submenus, page hierarchy, routing and role-based access control.

IMPORTANT: Do not create 29 independent navigation items. Group related pages under logical parent menus.

1. PROJECT IDENTITY

Project: SATYA-APAAR 2.1

Full Name: Student Admission Trust & Yield Assurance.

Organisation: AICTE.

Problem Statement: SIH26263.

Core Vision: One student. One academic identity. Every admission traceable. Every aggregate reconciled. Every approved seat accounted for.

Treat the uploaded SATYA-APAAR 2.1 Enhanced Final Proposed Solution PDF as the primary source of truth.

Do not introduce unrelated features or change the approved project architecture.

2. PUBLIC WEBSITE NAVIGATION — FIXED FIVE MENUS

The public website must have exactly these five navigation links:

1. Home — Page 01
2. About Us — Page 02
3. Features — Page 03
4. Resources — Page 04
5. Dashboard — Page 05 / authenticated portal entry

Keep Login/Register as a separate highlighted CTA button, not an additional navigation category.

Do not add new public navigation links as more pages are developed.

Public website shared header

- Government of India utility bar.
- Ministry of Education logo.
- AICTE logo.
- SATYA-APAAR 2.1 branding.
- Five fixed navigation links.
- Login/Register CTA.
- Accessibility controls: A-, A, A+.
- Skip to Main Content.
- Helpline Number.
- Get Support.
- Language accessibility option.

3. AUTHENTICATION AND ROLE SELECTION

Page 05 — Login / Register.

Page 06 — Role Selection.

Support these four roles:

1. AICTE Administrator.
2. Institution Operator.
3. Authorised Verifier.
4. System Administrator.

Implement secure authentication and role-based redirection.

After login, redirect users to their respective dashboards.

Do not expose administrative routes to unauthorised users.

4. AUTHENTICATED PORTAL SIDEBAR — PARENT MENUS AND SUBMENUS

A. INSTITUTION PORTAL

Parent: Institution Portal

Submenus:

- Institution Registration — Page 07.
- Institution Dashboard — Page 08.
- Institution Profile.
- Programme & Intake Details.

B. SUBMISSIONS

Parent: Submissions

Submenus:

- Data Upload & Mapping — Page 09.
- Preflight Validation Results — Page 10.
- Submission Tracking — Page 16.
- Correction & Resubmission History.

C. RECONCILIATION

Parent: Reconciliation

Submenus:

- Aggregate Reconciliation — Page 11.
- Programme-wise Reconciliation.
- Category-wise Reconciliation.
- Variance Details.
- Correction Requests.

D. STUDENT RECORDS

Parent: Student Records

Submenus:

- Student Records & Search — Page 12.
- Student Profile.
- TEIE Enrolment Timeline — Planned Page 13.
- Admission History.
- Transfer & Withdrawal History.

E. IDENTITY RESOLUTION

Parent: Identity Resolution

Submenus:

- APAAR Identity Resolver — Page 14.
- Identity Validation.
- Candidate Matching.
- Identity Exceptions.

F. SEATGUARD

Parent: SeatGuard

Submenus:

- Seat Ledger — Page 15.
- Approved Intake.
- Category-wise Seat Utilisation.
- Seat Allocation History.

Institution Operators have view-only access to approved seat information. Authorised AICTE officers manage applicable policy and intake information.

G. AICTE ADMINISTRATION

Parent: AICTE Administration

Submenus:

- AICTE Central Dashboard — Page 17.
- Institution Explorer — Page 18.
- Institution Details.
- State-wise Monitoring.

H. REVIEW & COMPLIANCE

Parent: Review & Compliance

Submenus:

- AICTE Review Queue — Page 19.
- Review Case Workspace — Page 20.
- Pending Cases.
- Assigned Cases.
- Decision History.

I. INTEGRITY INTELLIGENCE

Parent: Integrity Intelligence

Submenus:

- AI Risk Analysis — Page 21.
- Explainable Risk Factors.
- Peer Benchmarking.
- Enrolment Relationship Graph.
- Model & Rule Transparency.

J. POLICY & INTAKE

Parent: Policy & Intake

Submenus:

- Policy & Approved Intake Master — Page 22.
- Programme-wise Intake.

- Category Allocation.
- Policy Versions.
- Seat Change History.

K. RECORDTRUST

Parent: RecordTrust

Submenus:

- Audit Centre — Page 23.
- Tamper-Evident Audit Logs.
- Hash Chain Verification.
- Audit History.

L. ANALYTICS & REPORTS

Parent: Analytics & Reports

Submenus:

- Reports & Analytics — Page 24.
- Institution Reports.
- Programme Reports.
- State-wise Reports.
- Seat Utilisation.
- Risk Analytics.
- Export Reports.

M. VERIFICATION PORTAL

Parent: Verification

Submenus:

- Authorised Verifier Dashboard — Page 25.
- Credential Verification.
- QR Verification.
- Bulk Verification.
- Verification History.
- My Requests.
- ConsentPass — Page 26.
- Credential Issuance.
- Credential Lifecycle.
- Revocation Status.

N. SYSTEM ADMINISTRATION

Parent: System Administration

Submenus:

- User Management & Roles — Page 27.
- Role & Permission Matrix.
- System Configuration.
- Integration & System Health — Page 28.
- API Request Logs.
- Failed Requests & Retry Queue.
- Notifications & Settings — Page 29.
- Notification Preferences.
- Alert Rules & Thresholds.
- Notification Templates.

IMPORTANT: Page 29 must not create a second independent User Management module. Page 27 is the primary location for user creation, editing and role administration. Page 29 may provide shortcuts to user administration.

5. COMMON ACCOUNT AND SUPPORT AREA

These are utility actions, not additional primary business modules:

- My Profile.
- My Account.
- Notifications.
- Help & Support.
- Contact Support.
- Logout.

Show only the relevant options for the current role.

6. ROLE-BASED SIDEBAR VISIBILITY

Do not show every submenu to every user.

Institution Operator:
Show institution registration, dashboard, submissions, reconciliation, student records, identity status, TEIE, SeatGuard read-only and submission tracking.

AICTE Administrator:
Show national dashboard, institutions, submissions monitoring, reconciliation, authorised

student records, identity resolution, SeatGuard, review queue, Integrity Intelligence, policy management, RecordTrust and reports.

Authorised Verifier:
Show verifier dashboard, credential verification, QR verification, bulk verification if permitted, verification history, requests and ConsentPass.

System Administrator:
Show user management, roles and permissions, system configuration, integration health, notifications, alert rules and audit access.

Enforce permissions in both frontend and backend. Hiding a menu item is not sufficient security.

7. SCREEN NUMBERING — PRESERVE THE DESIGN REFERENCES

Use the following page mapping:

01 Home
02 About Us
03 Features
04 Resources
05 Login / Register
06 Role Selection
07 Institution Registration
08 Institution Dashboard
09 Data Upload & Mapping
10 Validation Results
11 Aggregate Reconciliation
12 Student Records
13 TEIE Enrolment Timeline (planned screen; design reference pending)
14 APAAR Identity Resolution
15 SeatGuard – Seat Ledger
16 Submission Tracking
17 AICTE Central Dashboard
18 Institution Explorer
19 AICTE Review Queue
20 Review Case Workspace
21 Integrity Intelligence (AI)
22 Policy & Approved Intake Master
23 RecordTrust Audit Centre
24 Reports & Analytics
25 Authorised Verifier Dashboard
26 ConsentPass – Credential Issuance & Verification

27 System Administration
28 Integration & System Health
29 Notifications, User Management & Settings

Do not renumber existing screens.

8. ROUTING ARCHITECTURE

Use React Router.

Create logical route groups:

/
/about
/features
/resources
/login
/register
/select-role

/institution/dashboard
/institution/profile
/institution/registration
/institution/submissions/upload
/institution/submissions/validation
/institution/submissions/tracking
/institution/reconciliation
/institution/students
/institution/students//timeline
/institution/identity
/institution/seatguard

/aicte/dashboard
/aicte/institutions
/aicte/submissions
/aicte/reconciliation
/aicte/review-queue
/aicte/review-queue/
/aicte/integrity
/aicte/policy-intake
/aicte/audit
/aicte/reports

/verifier/dashboard
/verifier/credentials

/verifier/qr-verification
/verifier/bulk-verification
/verifier/history
/verifier/requests
/verifier/consentpass

/admin/users
/admin/roles
/admin/configuration
/admin/integrations
/admin/notifications

/support
/profile

Use dynamic route parameters for student IDs, case IDs and institution IDs.

Protect all authenticated routes with authentication and role guards.

Redirect unauthenticated users to Login.

Redirect users without permission to an appropriate access-denied page.

9. SHARED COMPONENT ARCHITECTURE

Build reusable components:

- GovernmentUtilityBar.
- PublicHeader.
- AuthenticatedHeader.
- MinistryBranding.
- AICTEBranding.
- AccessibilityToolbar.
- RoleBasedSidebar.
- SidebarParentMenu.
- SidebarSubmenu.
- BreadcrumbNavigation.
- NotificationBell.
- UserProfileDropdown.
- DashboardStatCard.
- DataTable.
- SearchAndFilter.
- StatusBadge.
- ChartCard.
- FileUpload.

- Pagination.
- ConfirmationModal.
- Footer.
- LoadingState.
- EmptyState.
- ErrorState.

Keep the same visual identity throughout the application.

10. UI DESIGN RULES

Follow the supplied Academic Bank of Credits portal as the visual inspiration.

SATYA-APAAR branding must remain consistent:

- Navy blue and white.
- Royal blue action buttons.
- Orange highlights.
- Light blue backgrounds.
- Green success statuses.
- Red error and high-priority statuses.
- Professional government portal typography.
- Clean dashboard cards.
- Consistent table styling.
- Responsive desktop, tablet and mobile layouts.

Keep the government utility bar and accessibility controls consistent.

The public header and authenticated header may differ in navigation content, but must share the same branding and visual language.

Do not increase the number of top-level navigation links when new modules are added.

Use expandable sidebar menus for authenticated users.

Highlight the active parent and active submenu.

Keep sidebars collapsible.

Use breadcrumbs for nested pages.

11. DUPLICATE MODULE PREVENTION

A functionality must have one canonical implementation and one canonical route.

If multiple roles need the same functionality, reuse the same page and apply role-specific permissions.

Examples:

- Student Records should not be separately duplicated for Institution and AICTE.
- Aggregate Reconciliation should reuse one core module.
- APAAR Identity Resolver should be a shared service.
- Submission Tracking should reuse the same submission records.
- RecordTrust should maintain one audit history.
- User Management should exist only in System Administration.
- Notification settings should not duplicate user administration.
- Policy & Intake management should remain under AICTE administration.

Different roles may see different data and actions within the same module.

12. TECHNICAL STACK

Follow the approved project proposal:

Frontend:
React.js, TypeScript, Vite, React Router, Axios, Lucide React and Recharts.

Backend:
Python, FastAPI, Pydantic, SQLAlchemy and REST APIs.

Database:
PostgreSQL with Alembic migrations.

Data Processing:
Pandas and OpenPyXL.

AI/ML:
Scikit-learn, Isolation Forest, Median/MAD, NetworkX and Fellegi-Sunter matching.

Security:
JWT, RBAC, institution-scoped access, password hashing, HMAC-SHA256, encryption and hash-chained audit logs.

Do not introduce unnecessary microservices or infrastructure.

13. IMPLEMENTATION REQUIREMENTS

Before building individual pages:

1. Analyse the complete uploaded PDF.
2. Establish the final route hierarchy.
3. Create the shared header, sidebar and footer.
4. Create the four role-based dashboard layouts.
5. Implement authentication and route guards.
6. Implement reusable UI components.
7. Create consistent design tokens.
8. Verify that each of the 29 screens belongs to the correct parent menu.
9. Check for duplicate routes and duplicate features.
10. Confirm responsive navigation.

Do not build all 29 screens as separate unrelated applications.

Do not use fake external integrations as if they were live.

Clearly label mock data, simulated APAAR registry checks and prototype integrations.

Maintain student privacy, consent, auditability and human review safeguards.

14. FIRST DELIVERABLE

For this task, do NOT start implementing all business pages immediately.

First generate:

1. Complete application sitemap.
2. Public navigation structure.
3. Four role-based sidebar structures.
4. Page-to-menu mapping for all 29 screens.
5. React Router route hierarchy.
6. Shared component folder structure.
7. RBAC permission matrix.
8. Implementation sequence.

Present the architecture for review before proceeding with individual page development.

The final objective is one integrated, production-oriented SATYA-APAAR 2.1 application, not 29 disconnected screens.
